MST BLOCKCHAIN BUILDATHON

About the MST Blockchain

The MST Blockchain challenges builders to create innovative, practical, and scalable products powered by MST Blockchain. Go beyond traditional DApps, basic wallet integrations, and projects that simply bolt blockchain on as a feature

Track Requirements - Mandatory

All five requirements below are mandatory for prize eligibility. Read them carefully before building.

1. MST Blockchain Usage

- Your project must use MST Blockchain as a meaningful, integral part of the product.
- A simple wallet connection or single isolated transaction is not sufficient.

2. MST Testnet + Mainnet Deployment (Funds will be given)

Every project must be deployed on MST Mainnet before submission.

Your submission must include:

- MST Mainnet contract address
- At least one verifiable MST Testnet transaction hash
- A working application or demo link (wherever applicable)

3. Public GitHub Repository

Every team must submit a public GitHub repository with the project's full source code, including:

Smart contracts + frontend / backend code

README with MST integration details, contract addresses, and setup instructions

4. BridgeKey Wallet Integration - Strongly Recommended

BridgeKey is the official non-custodial wallet for MST Blockchain.

Teams are strongly encouraged to integrate BridgeKey for wallet connection, network switching,

and smart contract signing in their DApps.

- **BridgeKey Website:** bridgekey.io
- **Chrome Extension:** chromewebstore.google.com/detail/bridgekey/bfjojdcfenehemjgjlepdjomkpginlkg
- **Android App:** play.google.com/store/apps/details?id=com.bridgekey

5. Working Product + On-Chain Proof

A working deployed application is strongly preferred over mockups.

Projects that judges can interact with and test will have a significant advantage.

Your project must have at least one verifiable MST Testnet transaction demonstrating core functionality.

RPC FORT TESTNET AND MAINNET DEPLOYMENT:

MST Blockchain — RPC & Chain IDs

Network Name : MST Mainnet

RPC URL : https://mariorpc.mstblockchain.com/

Chain ID : 4646

Symbol : MSTC

Explorer : https://mstscan.com

Network Name : MST Testnet

RPC URL : https://testnetrpc.mstblockchain.com

Chain ID : 91562037

Symbol : tMSTC

Explorer : https:/testnet.mstscan.com

MST Blockchain Developer Resources

Use the official MST tools and documentation to build quickly on MST Blockchain. Start with the Vibe Kit for rapid scaffolding, use the JS/TS SDK for contract interaction, and verify transactions on MSTScan.

Judging Criteria

What Wins at This Hackathon

Problem → Solution → Meaningful MST Usage → Working Product → Testnet Deployment → Scale

Strong ideas, meaningful blockchain integration, and solid execution is important.

Use of AI & Originality Policy

AI coding assistants, AI agents, MCP, Vibe Kit, SDKs, open-source libraries, and other developer tools are all permitted. Every team must fully understand the code they submit and be ready to explain their architecture, MST integration, and implementation decisions to judges.

⚠ ***Projects found to be substantially copied, plagiarised, or using fake / misleading deployment or transaction data may be disqualified from all prizes.***

Round 1: Idea Submission (Completed)

Submission Requirements:

- Project title and problem statement
- Proposed solution and key features
- Target users and real-world use case
- Proposed technology stack and MST Blockchain integration plan
- Implementation plan and expected impact

Evaluation Criteria: Innovation, feasibility, real-world relevance, technical approach, and potential to develop a functional MVP.

Round 2:
MVP Build Sprint | Smart Contract Deployment on MST Blockchain

Shortlisted teams must develop their proposed ideas into a functional MVP and demonstrate real blockchain integration using the MST Blockchain network.

Mandatory Requirement: Teams must deploy their smart contracts on the MST Blockchain Testnet and demonstrate that the contracts and on-chain transactions are working correctly. Projects should demonstrate actual blockchain functionality, not just a UI prototype or simulated transactions.

Submission Requirements

- **Working Prototype or MVP:** A functional application implementing the core features of your proposed solution.
- **Smart Contract Deployment:** Deploy your smart contracts on the MST Blockchain Testnet and provide the deployed contract address.
- **On-Chain Transactions:** Demonstrate successful transactions on the MST network, with transaction hashes verifiable through the blockchain explorer.
- **MST Blockchain Integration:** Show how your application interacts with deployed smart contracts and reads or writes actual on-chain data.
- **GitHub Repository:** Provide the source-code link, including smart contracts, frontend, backend, and deployment scripts, wherever applicable.
- **2–3 Minute Demo Video:** Demonstrate the working application, smart contract interactions, and successful on-chain transactions.
- **Live Deployment Link:** Provide a live application link, if available.
- **Project Documentation:** Include a brief project description, problem statement, key features, technology stack, contract address, transaction hashes, and deployment details.

MST Blockchain Network Deployment

Teams are expected to demonstrate deployment and functionality on the MST Blockchain Testnet + Mainnet during Round 2 (Funds will be given for mainnet)

Evaluation Criteria

Projects will be evaluated based on:

- Smart contract deployment and successful execution.
- Verifiable on-chain transactions on MST Blockchain.
- Correct integration between the application and smart contracts.
- Functionality, technical quality, and innovation.
- Code quality, implementation, and security considerations.
- Real-world relevance, usability, and potential impact.

Important Instructions

- A UI-only prototype or simulated blockchain transaction will not satisfy the blockchain integration requirement.
- Teams must provide valid contract addresses and transaction hashes that evaluators can verify.
- Ensure the core features work correctly and the smart contracts can be interacted with successfully.
- Keep your GitHub repository accessible for evaluation.
- Only teams shortlisted after Round 2 will advance to the final in-person Demo Day.

Build it. Deploy it. Execute real transactions. Prove it on MST Blockchain. 🚀

Round 3: Final Demo Day | In-Person Presentation

Date: 1 November 2026
Time: 10:00 AM – 4:00 PM IST
Venue: Masterstroke Technosoft Pvt. Ltd. (MST Blockchain), Kohinoor World Tower, Tower 3, Office 403, Pimpri, Pune, Maharashtra.

The **top 15 teams** shortlisted after Round 2 will qualify for the final MST Blockchain Demo Day. Teams will present their working MVPs to the MST Blockchain team, demonstrate their solutions, and explain the real-world problems they aim to solve.

Submission and Presentation Requirements:

- A working prototype or MVP of your project.
- A live demo showcasing the key features and functionality.
- A brief presentation covering the problem statement, proposed solution, target users, and real-world use case.
- Technical architecture and technology stack used.
- GitHub repository or source-code link.
- Live deployment link, if available.
- Explanation of implementation, challenges faced, and future development plans.

Evaluation Criteria:

Projects will be evaluated based on innovation, functionality, technical implementation, problem-solving approach, real-world impact, scalability, and the quality of the final presentation.

Important Instructions:

- Only the top 15 teams shortlisted after Round 2 are eligible to participate.
- Finalists must attend the Demo Day in person at the MST Blockchain office in Pune.
- Teams should ensure their MVP is ready for demonstration and their code repository is accessible.
- All team members should be prepared to explain their contributions and answer questions from the evaluation panel.

Rewards and Opportunities:

Winners receive prizes, goodies, a two-month remote internship opportunity, and the opportunity to explore incubation support of up to $10,000, subject to the program's terms and selection.

Bring your ideas to life, demonstrate what you've built, and show us how your solution can make a real-world impact. 🚀
